Becoming the World’s Leader in Producing
Low Cost Green Solar Grade Silicon Metal
This presentation includes certain “forward-looking statements”

All statements, other than statements of historical fact, included herein, including, without limitation, statements regarding future plans and objectives of the company, are forward-looking statements that involve various risks, assumptions, estimates and uncertainties, and any or all of these future plans and objectives may not be achieved. The terms SGSI, Solar Grade Silicon and Polysilicon are used interchangeably and refer to high purity silicon used in the solar panel industry, with 99.999% purity, also referred to as “5N”.

These statements reflect the current expectations or beliefs of HPQ-Silicon Resources Inc. (“the Company”) and are based on information currently available to the Company. There can be no assurance that such statements will prove to be accurate, and actual results and future events could differ materially from those anticipated in such statements. All of the forward looking statements contained in this presentation are qualified by these cautionary statements and the risk factors described above. Furthermore, all such statements are made as of the date this presentation is given.

An investment in the Company is speculative due to the nature of the its business. The ability of the Company to carry out its plans as described in this confidential presentation is depending on obtaining the required capital. There is no assurance that the Company will be able to successfully raise the capital required or to complete each of the growth initiatives described. Investors must rely upon the ability, expertise, judgment, discretion, integrity and good faith of the management and Board of the Company.
**Investment Proposition**

**HPQ IS DEVELOPING THE Disruptive Technology in GREEN Solar Grade Silicon Metal**

Present Day Processing - Followed by Downstream Manufacturing

**HPQ PUREVAP™ QRR a one step Carbothermic Process expected to reduce production cost of Solar Grade Silicon Metal by as much as 80%**

**The results are radical but the science is simple!**
The cost curve for SG SI (polysilicon) suggest that long-term solar-grade polysilicon price below USD 15/Kg is not feasible. HPQ and the PUREVAP™ will challenge that.
PUREVAP™
The Only Environmentally Friendly Option

PUREVAP versus Traditional Processes

**Siemens Process**
- 11.484 tons of Quartz
- 4.4 tons of Carbon
- 176 MWh
- 17.18 tons of acid gas

**PUREVAP**
- 2.56 tons of Quartz
- 0.85 tons of Carbon
- 13 MWh
- No acid needed!

**Elkem Process**
- 5.924 tons of Quartz
- 2 tons of Carbon
- 40 MWh
- Use of strong acids (HCl, HF, HNO3)

**IN**
- MG-Si production
- Hydrochlorination
- Condensation
- Distillation
- Decomposition

**OUT**
- 1 ton of SOG-Si
- 124 MT of CO₂ eq
- Nasty gas by-products (HCl/H2/SiCl4)

- 1 ton of SOG-Si
- 9.1 MT of CO₂ eq

- 1 ton of SOG-Si
- 28.1 MT of CO₂ eq
- Great quantity of Waste water

Debt free after gold spinout
HPQ Silicon plans to become a vertically integrated Silicon Metal Company

Subsidiaries
- QUARTZ PROPERTIES
- PUREVAP QRR
- HPQ SOLAR
- BT Gold Option and JV With GNH
- BEAUCHE GOLD FIELDS INC
- BEAUCHE GOLD PROJECT
- RONCEVAUX GOLD OPTION

HPQ Silicon Resources Inc.

Divisions
- Quartz Quarries

Products
- High Purity Quartz by-products
- Metallurgical Grade Silicon Metal
- High Purity and Specialty Grade Silicon Metal
- Solar Grade Silicon Metal
- Polysilicon Wafers for Solar Cells

Purity
- 99.99+% SiO2
- 98.5 % to 99.5 % Si
- 99.6+ to 99.99+% Si
- 99.999+% Si

Market Size
- ≤ 100 K MT per Year
- ≥ 2.2 Million MT per Year
- ≥ 220 K MT per Year
- ≥ 350 K MT per Year

Average selling price in Kg (USD)
- > $ 5.00
- $2.20 to $2.60
- $2.80 to $3.75
- $13.00 to $16.00

2017, 2018 development steps for HPQ
- Exploration work to start, goal delineating resources on Properties
- Following lab scale validation confirming capacity of taking 98.1 SiO2 feedstock and produce High Purity Si, the plans are to build a pilot system to confirm commercial scalability and study commercial opportunities for this significant market segment
- R&D ongoing, goal remains validating Purevap QRR capacity to produce 5N+ purity
- Studying business opportunities of expanding vertical integration further down the PV manufacturing cycle
- Following legal settlement, work on this significant hard rock gold project re-starting. Goal is transferring later at costs+ the project to BGF

Gold assets are in the process to be spun out during 2017 to unlock value
Ownership: 100% now, 20% after spin out
STRATEGIC DEVELOPMENT AGREEMENT WITH PYROGENESIS

- PyroGenesis is developing for HPQ-Silicon’s exclusive use the PUREVAP™ QRR (Patent Pending) a 1 Step, Clean Tech process for making SG Si directly from Quartz, using a plasma submerged arc
- HPQ has acquired the intellectual property rights to the PUREVAP™ QRR process and will finance the development as it relates exclusively to the production of silicon metal from quartz (*)
- PyroGenesis is building and will oversee production from a 200 TPY SG Si R&D pilot plant (Press releases August 2, 2016, September 30, 2015)

* PyroGenesis retains a royalty-free, exclusive, irrevocable worldwide license to use the process for purposes other than the production of silicon metal from quartz
Proof of Concept Metallurgical Tests Program, Scaling up results

Thin layer of material produced during first tests

First nugget of Si (99.97% Si) produced during final proof of concept test (About 0.1 g)

15 tests later

Process Characterization Testing Phase, Scaling up results

Small bead produced during test #24

Series of chunks of 99.93 % Si produced during test #32 (8.8 g)

Series of chunks of 99.97 % Si produced during test #51 (8.67 g)

Modification done to the PUREVAP™ QRR have made it possible for test 51 to produce the same quantity of Si as in test #32, while using smaller batch sizes (55 wt% less)

This represent a 531% increase in Yield!
**COMPARISON of TODAY’S PROCESS and PUREVAP™**

MG Silicon Metal (98% to 99.5% Si)

- Market Size (Ton) ≈ 350 K Tons
- Market Size (US$) = 6 Billion
- Demand Growth ≈ 6% CAGR
- Price (US$/kg) 2.4 to 2.8
- Cash Cost (US$/kg) 1.75 to 2.25
- Capex Cost (US$/kg) 7 to 14

2015 Data (Sources CRU, Ferroglobe, Bloomberg, Viridis.qoq, Roskill)

**Solar Grade SI Key Matrix (5N and Higher)**

- Market Size (Ton) ≈ 2.2 Million Tons
- Market Size (US$) = 6 Billion
- Demand Growth ≈ 6% CAGR
- Price (US$/kg) 2.4 to 2.8
- Cash Cost (US$/kg) 1.75 to 2.25
- Capex Cost (US$/kg) 7 to 14

2015 Data (Sources CRU, GTW, IEEE JOURNAL OF PHOTOVOLTAICS, VOL. 5, NO. 2, MARCH 2015, Bloomberg)

**PUREVAP™ Quartz Reduction Reactor**

A Proprietary (Patent Pending) One-step Process To Make Solar Grade Silicon Metal

**“ELEGANT IN ITS SIMPLICITY”**

Silicon Metal (98% to 99.5% Si)

- SiO₂, 99.5%
- Coal - Wood Chips

Electric Arc Furnace

MG Silicon Metal Is Dissolved In Hydrochloric Acid To Form Trichlorosilane (HSiCl₃)

- Trichlorosilane (HSiCl₃) is Further Refined
- Solar Grade Silicon Metal 99.999+% Si

**PUREVAP Process Key Working Matrix**

- Combine Market Size (Ton) > 2.7 Million Tons
- Combine Market Size (US$) > 11 Billion
- Demand Growth > 10 % CAGR
- Cash Cost (US$/kg) 1.75 to 2.25
- Capex Cost (US$/kg) 7 (2 K TPY Reactor)
- Capex Cost (US$/kg) 4 (10 K TPY Reactor)

Capex Cost Sources from PyroGenesis Canada Rough Order of Magnitude Study, (Capex and Opex numbers to be refine after Pilot Plant start operation)
**PUREVAP™ DISRUPTIVE POTENTIAL**

**Capex Analysis**

**PUREVAP™ QRR** US$18.5 CapEx per kg of annual capacity matrix at Pilot Plant phase demonstrate the disruptive potential of the technology

**Phase 3:** Hot commissioning of Pilot Plant schedule from Nov 2017

**Phase 4:** Testing and Operating Pilot Plant schedule from March 2018
The total cost to purchase and commission the *PUREVAP™ QRR* Pilot Plant and related Intellectual Property is CDN$8,260,000 to be invested between 08/2016 en 12/2018:

- $1,000,000 for purchase of the related Intellectual Property *(Completed)*
- $4,430,000 for design, fabrication, assembly, and testing *($3,190,200 Completed, $1,239,800 by Nov-2017)*
- $520,000 for hot commissioning of the pilot system *(To be paid From Dec-2017 to Feb-2018)*
- $2,310,000 for testing and operating the pilot system during 10 months *(To be paid From March to Dec-2018)*

The Projected Cash call over the next 24 months are:

- $1,499,800 for 2017, *(To be paid From October 2017 to December 2017)*
- $2,570,000 for 2018

**HPQ Silicon funding advantages:**

- The project is eligible for government funding (Provincial and Federal) for 55% to 80% of the cost
  - Discussion with both levels of Government are ongoing, but approvals are only expected during Q3 2017
- Over CDN$ 2,300,000 worth of warrants are in the money, majority in friendly hands
- The acquisition of *PUREVAP™* Intellectual property opens up additional options for financing because investors want to see direct control over the key intellectual property
- Management is exploring several likely non – dilutive paths for financing the Pilot Plant
  - If the shares prices exceed $0.40, then over CDN$ 11,2 Million could be raised via warrant exercises
- HPQ will be entitled to R&D research credits worth about 14% of the CDN$7,260,000 investment
**HPQ – PUREVAP™ RAW MATERIAL**

- **HPQ-Silicon** is the largest holder of High Purity Quartz properties in Quebec, with over 3,500 Ha under claims.

- The Roncevaux High Purity Quartz, with it up to 3N purity (99.9% SiO₂) samples is in high demand, and has successfully passed rigorous testing protocols of a major silicon metal producer.

- The Martinville High Purity Quartz is unique and rare with samples up to 4N purity (99.99% SiO₂).

**INRS Test 2016 Results**
Plans Are To Establish HPQ Quarry Operations in order to meet our Raw Material Requirement For Future PUREVAP™ QRR Plants.

- For 2017, HPQ plans on developing the Roncevaux Quartz Potential:
  - **Key goal, delineating a significant resource**
  - A Preliminary Economic Assessment (PEA), based on the fact that the PUREVAP™ QRR process is the only process in the world that can transform 98.1% SiO₂ into 99.9+% Si will be undertaken in 2018
  - Until its completion, all our financial models will be based on purchasing the raw High Purity Quartz required for the plants, in the open market at market prices
  - Upon successful start of quarry operations on Roncevaux, HPQ Silicon will be a fully integrated Silicon Metal Producer
Why Invest in HPQ Now?

HPQ Is Canada’s Only Public Pure Play Investment In the Lucrative Solar Grade Silicon Market

HPQ Silicon proven bench test success now graduating to Pilot Plant

**HPQ PUREVAP™ Proprietary disruptive technology:**

- Low Opex, Low Capex, Minimal Carbon Footprint and Environmentally friendly
  - Less than 20% of the Industry’s cash cost,
  - 5% of Industry Capex, and
  - Estimated 75% reduction in carbon footprint
  - No Nasty by-products (Hydrochloric acid (HCl))/H2/Silicon Tetrachloride (SiCl4))
- 200 TPY Pilot Plant almost completed and talking to potential industry partners
- The only one step process in the world that can take low quality feedstock (98.1% SiO₂) and produce High Purity Silicon Metal (99.97% Si)
Low Purity Feedstock
98.14 % SiO₂

High Purity Feedstock
99.9+ % SiO₂

PUREVAP™

“Feedstock Flexibility: A Visible Advantage”
SIMPLE PUREVAP™ 1-STEP PROCESS
“ELEGANT IN ITS SIMPLICITY”

Quartz Reduction Reactor
- Quartz reduction with carbon using plasma submerged arc
- Silicon refining under vacuum to remove impurities

Vacuum Arc Furnace
- Reaching very low air pressure level
  - (m bar)
- Very high temperature plasma arc
  - +3500 degC
- Resulting in vaporized impurities before Si can vaporize
  - P, K, Mg, Zn, Ca, Mn, Pb, Al, Fe, etc

Solar Grade Silicon Metal “Polysilicon”
The **PUREVAP™ QRR** process is estimated to generate 14.1 kg CO2 eq/Kg SG Si;
The Siemens process (the industry standard) normally generates 54.0 kg CO2 eq/Kg SG Si of emissions.*

- This represents 75% fewer greenhouse gas emissions, which is justified by elimination of the emissions emanating from the use of chemicals, as well as, energy consumption from the additional purification step.

China’s coal intensive electricity grid means that making silicon solar panels there – although cheaper – leaves a carbon footprint almost twice as large as that making it in Europe.

Source: Study led by Fengqi You at Northwestern University (Nature 510, 19 June 2014)

Traditional process of transforming quartz in solar grade silicon metal represent the biggest contributing source to the lifecycle of CO₂ emissions for solar energy.

ADVANTAGE PUREVAP™ GOING FORWARD, AS MORE AND MORE SOLAR PRODUCER WILL BE ASK TO CONSIDER THE LIFECYCLE CO₂ FOOTPRINT OF THEIR PROJECTS
**GROWING METALLURGICAL GRADE SILICON METAL MARKET**

- MG Si 2015 consumption was 2.2 Million Tons;
  - > $US 6 billion in worldwide sales

- Demand is expected to grow at 6.0% CAGR from 2016 – 2020

- CRU forecasts a 2017-2020 price recovery for MG Si driven by rising MG Si demand

- **In 2015, 15 % of Global MG Si (98.5% Si) production was further refined to Solar Grade Si (SG Si, or “Polysilicon”) at 99.999% (5N) purity**
  - 350 K Tons of SG Si was sold in 2015 (~ $US 5Billion)

- Growth will be largely driven by the growing demand for Solar Grade (SG) Si (Polysilicon) material to be used in Photovoltaic (PV) solar panels

- Each Watt (W) of energy produced by a PV solar system demands ≈ 5 gr of SG Si

- GTM Research estimates that Installed PV demand to growth 15 % - 23 % annually, representing about 10 Gigawatt (GW) per year

- Significant SG Si Deficit are forecast from 2017 on as Gigawatt (GW) produce with Solar panels increases

Source: CRU 2015, Ferroglobe
Note: Silicon consumption, pricing, and capacity data are from CRU.
Very Strong Growth in PV Demand

› China still most important market, but reduced installations in coming years

› India and other emerging markets continue to grow

› Long term market outlook is increasingly geographically diversified

Results based on IHS Markit, Technology Group, PV Demand Market Tracker, Q4 2016. This data is not an endorsement of REC Silicon. Any reliance on the results are at the third party’s own risk. Visit www.technology.ihs.com for more details.
